

Agricultural Machinery Industry And Trading Ltd. Co.

ÇELİKEL Has been started production in Bogazliyan county of Yozgat in 1965. Our company, which started plough production at once, added cultivator production in the production range by 1985 and entered the development period.

Our company moved its production facility to an industrial city Konya in 1992 where to follow the technology is easier and to be able to produce new kinds of machinery. Our company continued production of cultivators and helixes in different sizes in Konya till 1998 and as automation equipment needs emerged in the stock breeding sector, our company changed its priorities in production program and started to produce multi functioned combine machines as well Single Row Maize Silage Machinery, Drum Grass Mowers, Grass Silage Machinery. The success achieved in production of those machines encouraged our company to produce new machines. After this encouragement, our company achieved to produce Clover Sowing Machine which is good for sprinkling sowing in 2002 which was the first in Turkey and Feed Breaking Machinery in 2003 and served to our farmers.

Our company have been serving to our farmers with production range of Single Row Maize Silage Machinery, Drum Grass Mowers, Grass Silage Machinery, Clover Sowing Machinery, Feed Breaking Machinery and Cultivators presently. In the same time our R-D and feasibility studies on saving time and labour costs are going on to offer costs cutting new products for stock breeding industry. We are aiming to add these new products in our range very soon. Our Celik El branded products are spread widely in Turkey markets to almost all farms, stock breeding enterprises and public institutions as well Province Agricultural Directorates, Agricultural and Credit Cooperatives and Sugar Beet Cooperatives. This is achieved by the quality of our products and qualified service network which solves the problems effectively.

In agricultural production, machinery took an important volume in farmers' capital. As our farmers are already have to work in limited facilities, they have power to spend for lower quality products which does not properly. In other hand there is a known reality that the time is very important in agricultural production. Farmers have to do some jobs in some limited time periods. The actions that not acted in time, causes loss of yield or bad quality in crops. Namely, farmers do not only pay for bad quality machines they, in the same time pay for the loss in yield and pay for the bad quality of crops caused by the low quality machines which does not work properly in time. Therefore to loss the money for farmers becomes inevitable.

Our company as aware of all these, increasing the products quality accordingly to the developments and technology. In the same time after sales services are available in all parts of Turkey with qualified staff and in time. The qualities of our products are registered with the T.S.E.K. Certificate given by Turkish Standards Institute and with the Test Reports given by Test Centre Directorate of Agricultural and Rural Affairs Ministry.

The satisfaction either before sales or after sales of our farmers is very important for us. Therefore we prepared this catalogue in which all parts of our machinery shown in details. The aim of preparing this detailed catalogue is to make easier finding and ordering any parts in case of any breakdown. Thus the requested parts will be delivered to you more quickly and faultless. We wish you success and thank you for choosing us. Sincerely yours.

Our product variety is listed below.

- Row Independent Maize Chopper ■ One Row Maize Chopper ■ Forage Harvester
- Feed Mixers ■ Bale Loading Machine ■ Feed Breaking Machinery
- Grain Crushing Machinery ■ Drum Mower ■ Leveling Blade ■ Rotary Rake ■ Cultivator
